

HemoCue® Hb 801 System: Quick Tip Guide

1. For capillary sampling, use the middle or ring finger. The patient should be seated with hands warm and relaxed, avoid fingers with rings.

2. Clean fingertip with disinfectant and allow to dry.

3. Using your thumb, lightly press the finger from the top knuckle towards the fingertip to stimulate blood flow.

4. Puncture at the side of the fingertip with a high-flow lancet.

5. Wipe away the first 2 or 3 drops of blood and press lightly towards the fingertip until another drop of blood appears.

6. Make sure the blood drop is large enough and fill the microcuvette completely in one continuous process. Do not let more than 40 seconds pass between filling (step 6) and inserting into the analyzer (step 8).

7. Wipe off any excess blood from the outside of the microcuvette. Make a visual inspection of the microcuvette. If there are air bubbles, discard and fill a new microcuvette.

8. With analyzer in Ready State, insert the filled microcuvette into the microcuvette holder and press down. The result will be displayed in just under one second.

9. Once the result is displayed, remove and discard the microcuvette. The result is displayed for 10 seconds and is automatically saved.

HemoCue® Hb 801 System

The HemoCue® Hb 801 System seamlessly fits point-of-care testing into your workflow.

Key features of the HemoCue® Hb 801 System include:

- Test results in under one second
- Reagent-free cuvettes improve open-vial stability
- Large display with intuitive on-screen symbols
- Perform internal quality control self-tests* on the analyzer

HemoCue OnCue™ Support

Service and support that won't slow you down. Only from HemoCue.

HemoCue OnCue™ Support is a comprehensive program designed to meet your needs as quickly and conveniently as possible.

Powered by HemoCue employees, you get answers and education from the experts who know our products best.

At your office, online, or on the phone, we're ready to do more for you.

*Refer to your local or regulatory agency for any external control requirements
